- The system shall allow administrators to assign roles to staff.

2. Product Management

- The system shall allow authorized staff to add products.
- The system shall allow authorized staff to edit products.
- The system shall allow authorized staff to remove or deactivate products.
- The system shall display product information.
- The system shall allow users to search for products.
- The system shall allow products to be grouped into categories.
- The system shall allow staff to set product prices.

3. Inventory Management

- The system shall display the available quantity of each product.
- The system shall allow staff to add new stock.
- The system shall allow staff to reduce or adjust stock.
- The system shall record every stock change.
- The system shall identify products with low stock.
- The system shall identify products that are out of stock.
- The system shall allow staff to view stock history.

4. Supplier Management

- The system shall allow staff to add suppliers.
- The system shall allow staff to update supplier information.
- The system shall allow staff to deactivate suppliers.
- The system shall store supplier contact information.
- The system shall allow staff to view products supplied by each supplier.

- The system shall keep a record of purchases from suppliers.

5. Customer Management

- The system shall allow staff to register customers.
- The system shall allow staff to update customer information.
- The system shall allow staff to search for customers.
- The system shall keep customer order history.

6. Sales Management

- The system shall allow staff to create a sale.
- The system shall allow staff to add multiple products to a sale.
- The system shall calculate the total cost of a sale.
- The system shall reduce product stock after a successful sale.
- The system shall record completed sales.
- The system shall allow staff to view previous sales.

7. Order Management

- The system shall allow customers or staff to create orders.
- The system shall allow products to be added to an order.
- The system shall calculate the order total.
- The system shall allow users to view order details.
- The system shall allow authorized users to cancel orders.
- The system shall track order status.
- The system shall keep order history.

8. Payment Management

- The system shall allow customers to make payments.
- The system shall support different payment methods.
- The system shall record payment details.
- The system shall show the payment status.
- The system shall allow authorized staff to process refunds.
- The system shall keep payment history.

9. Returns

- The system shall allow authorized staff to record returned products.
- The system shall record the reason for a return.

- The system shall update inventory when a returned product is accepted.
- The system shall record refunds where applicable.

10. Reports

The system shall provide:

- Daily sales reports.
- Weekly sales reports.
- Monthly sales reports.
- Product sales reports.
- Inventory reports.
- Low-stock reports.
- Purchase reports.
- Payment reports.
- Customer order reports.

11. Notifications

The system shall notify relevant users when:

- A product reaches low stock.
- A product becomes unavailable.
- A new order is created.
- A payment is successful.
- A payment fails.
- An order is cancelled.

12. Access Control

- The system shall restrict features based on user roles.
- Administrators shall have access to management functions.
- Managers shall have access to store management functions.
- Cashiers shall have access to sales and payment functions.
- Staff shall only access information they are authorized to access.

13. Audit

- The system shall record important user actions.
- The system shall record who performed an action.
- The system shall record when the action happened.
- The system shall allow authorized users to view activity history.

14. System Requirements

- The system shall be available to authorized users.
- The system shall protect user and business information.
- The system shall validate user input.
- The system shall prevent unauthorized access.
- The system shall maintain accurate product, inventory, order, and payment records.
- The system shall provide clear error messages when an operation fails.
